

Information Regarding Prevention and Management of Waste Lithium-Ion Batteries

a) Waste Prevention

To help prevent battery waste and extend battery service life:

- Charge and use the battery only as described in this manual.
 - Store the product in a cool, dry place away from direct sunlight, excessive heat, moisture and corrosive environments.
 - Avoid dropping, crushing, puncturing, dismantling, modifying or exposing the battery to excessive mechanical shock.
 - Do not expose the battery to fire or temperatures exceeding the specified operating or storage limits.
 - Proper use, charging and storage will help maximise battery life and reduce waste.
-

b) Separate Collection of Waste Batteries

- Do not dispose of lithium-ion batteries with household waste.
 - At the end of the battery's service life, dispose of it through designated battery collection points or authorised recycling facilities in accordance with local regulations.
 - Where available, use retailer, municipal or producer take-back schemes for waste batteries.
-

c) Collection, Take-Back, Re-use, Repurposing and Treatment

- Waste lithium-ion batteries should be collected separately to enable preparation for re-use, repurposing where appropriate, recycling and material recovery.
 - Separate collection helps conserve valuable raw materials and reduces environmental impacts.
 - Collection and treatment services are available through authorised collection points and recycling facilities.
-

d) Safety Instructions for Handling Waste Batteries

- Handle waste batteries carefully to prevent short circuits, fire or leakage.
 - Do not crush, puncture, dismantle, incinerate or expose waste batteries to excessive heat.
 - If the battery is damaged, swollen, leaking or overheating, discontinue use immediately and dispose of it through an authorised collection facility.
 - Where practical, cover exposed battery terminals with insulating tape before disposal.
 - Store waste batteries in a cool, dry place away from metal objects and combustible materials until they are recycled.
-

e) Meaning of Labels and Symbols

- **Crossed-out wheeled bin symbol:** Indicates that the battery must not be disposed of with household waste and must be collected separately for recycling.
 - **CE marking:** Indicates that the product complies with the applicable European Union legislation and conformity assessment requirements.
-

f) Environmental and Health Impact of Hazardous Substances

- Lithium-ion batteries contain substances that may present risks to human health and the environment if improperly handled or disposed of.
- Never dispose of batteries in fire, household waste or the natural environment.
- Proper collection and recycling help prevent environmental pollution, reduce safety risks and enable the recovery of valuable materials for future use.
